

### Key Features of Pronto

Real-time chat with read-receipts and presence detection

Mobile access across iOS and Android devices

Live video chat

File-sharing with unlimited storage

Task management to create, assign and manage project-related to-dos

Multi-institution support keeps multiple instances under one log-in

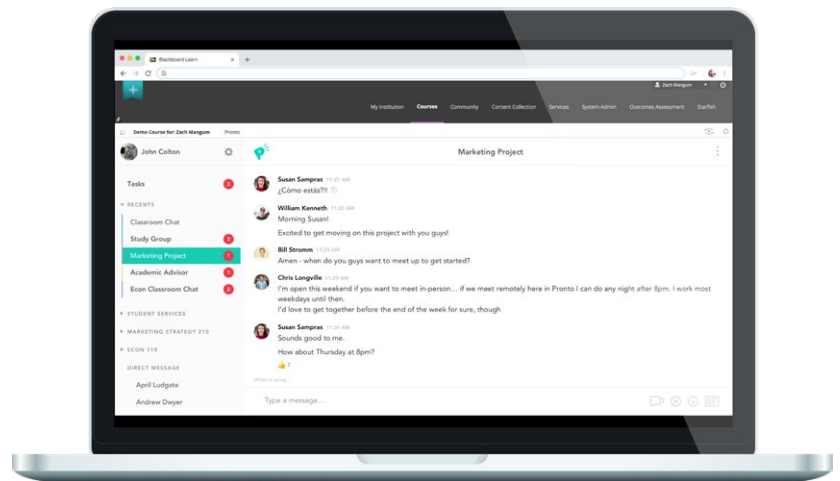

## Blackboard and Pronto Enhancing communication to drive results

Blackboard and Pronto have partnered to deliver a powerful, integrated communications application to users' fingertips. Pronto's integration with Blackboard Learn and Blackboard Open LMS enables users to instantly chat, share files, live stream, manage tasks and more, all within their Blackboard courses.

Developed by HitLabs, Pronto's modern design and mobile-first approach meets the expectations of today's students and those entering the workforce. By increasing opportunities for communication and collaboration on the platforms and devices they prefer, users are better set up for success.

### Integration Benefits

Pronto's LTI-based integration adds another layer of communication directly into Blackboard's LMS platforms, making collaboration easy and convenient. System administrators do not have to spend time uploading user information to Pronto. The integration automatically pulls roster information from Blackboard courses, and creates accounts based on enrollment. Best of all, training is minimal, so users can get started right away.

### Get started today

The Pronto integration is available for Blackboard Open LMS, and both the Original and Ultra Experiences for Blackboard Learn. Contact [support@trypronto.com](mailto:support@trypronto.com) to learn about licensing options and more.
